

# SPI-III™ Now with Presets!

The SPI-III™ preset mode is an addition to the already famously easy-to-use ndb's phase ID system. SPI-III™ users now just need to select a preset to perform phasing with all required parameters. Preset mode is compatible with all SPI-III™ units.

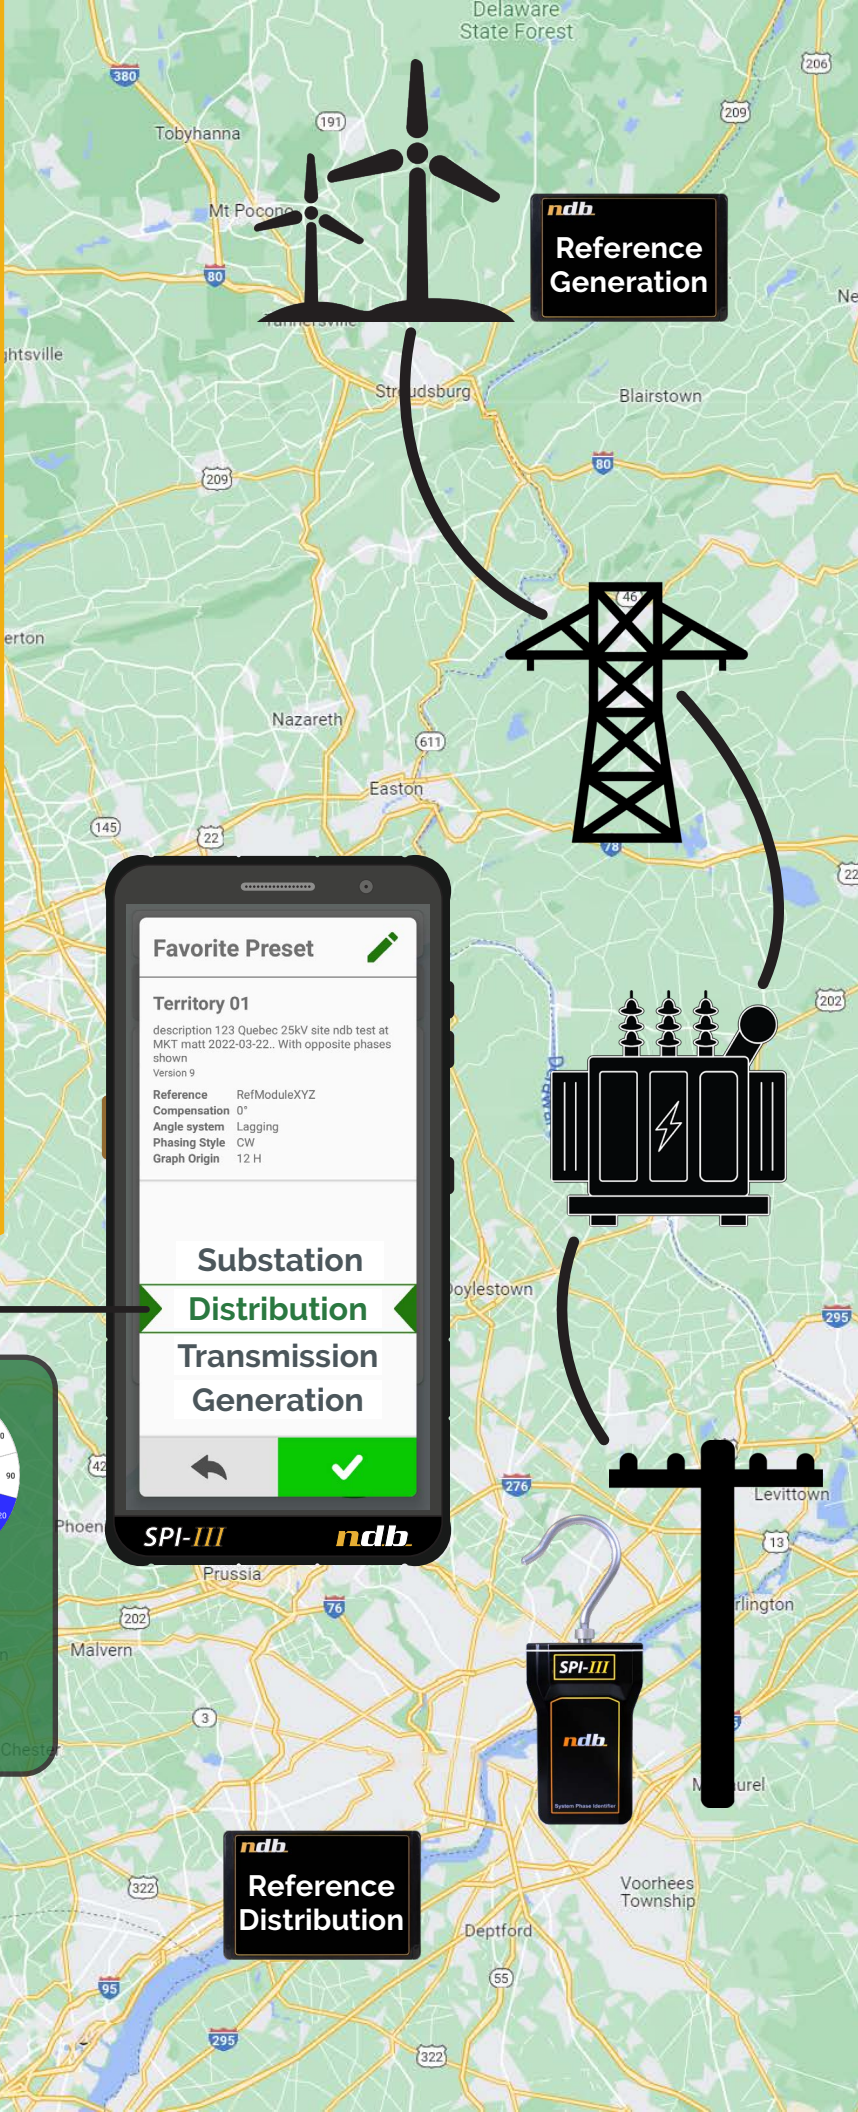

## Highlights

- Instant phasing setup
- Automatic phase shift compensation
- Automatic reference module selection
- Select your preset from a quick list
- Favorite presets quick access
- Manage presets from a web portal

**Reference Distribution**

Select a Preset from the list. The correct reference module and phasing parameters are automatically set (phase shift compensation, phasor style, etc).
